HIGH RISK & CRITICAL CARE OB:
Recognizing the Compromised Woman & Implementing Life-Saving Care

Suzanne McMurtry Baird,
DNP, RN

REGISTER TODAY for this 2 DAY SEMINAR
Specific to the In-Patient High Risk Mother
OB Deaths are Increasing in the US
So BE PREPARED by understanding the Risks, Hazards, and Warning Signs!

P.O. Box 7447 Chico, California 95927-7447
800-732-2387
WWW.PROEDCENTER.COM
**Why YOU Must Attend!**

**OB Complications & Maternal Deaths are INCREASING in the US and Canada**

Every OB Provider MUST...
- Understand Risks, Hazards, & Warning Signs
- Recognize disease states that increase risk status for pregnant women
- Understand measures to improve oxygen transport and tissue perfusion
- Recognize the compromised woman and implement Life Saving Care

"Preparation and Understanding are the key factors for safe practice of Obstetric Nursing & Maternal-Fetal well-being."

---

**PROGRAM OBJECTIVES:**

Following comprehensive lecture, case studies, & discussion, you will be able to:
- Review data and discuss theories re. the rise in maternal morbidity and mortality in the United States.
- List the most common medical diagnoses that cause critical illness and death in pregnancy.
- Review normal physiologic changes in pregnancy and the impact of these on care management of the high risk and critically ill woman.
- Understand the components of cardiac output and identify normal hemodynamic parameters in pregnancy and how to optimize values.
- Outline assessment parameters that may indicate maternal compromise.
- Discuss the components of oxygen transport physiology, consumption and measures to improve oxygen transport and tissue perfusion.
- Understand pulse oximetry technology and utilization.
- List the purposes and indications for invasive hemodynamic monitoring in pregnancy, and potential complications.
- Discuss technology use to monitor adult hemodynamics.
- Interpret patient care data presented from selected case studies and utilize critical thinking concepts to critique clinical management based on the pathophysiology of hemodynamic instability. Hypovolemia from hemorrhage, severe preeclampsia and HELLP.
- Compare cardiogenic and noncardiogenic pulmonary edema.
- Explain the pathophysiologic responses associated with pulmonary emboli, and management strategies and goals associated with care of the obstetric woman with an acute pulmonary complication.
- Outline the most common causes of hemorrhage in pregnancy.
- Discuss the pathophysiologic of hypovolemia and DIC.
- Review management of hemorrhage and DIC; volume resuscitation principles and blood component therapy to improve maternal outcome.
- Discuss classification of hypertension in pregnancy.
- Review pathophysiology and clinical presentation of severe preeclampsia and HELLP syndrome, and review algorithms for management of severe hypertension.
- Outline the types of cardiac disease/lesion and pregnancy risk.
- Identify management concepts for cardiac disease in pregnancy.
- Review the definitions for range of diseases known as sepsis and severe sepsis, which will allow you to distinguish between sepsis and severe sepsis.
- Discuss the sepsis bundles and how it is used in pregnancy
- Discuss collaboration between healthcare services/ agencies when a mother becomes critically ill during the OB course.
- Discuss initial and ongoing education including simulation and skills validation.
